Accounting, Costing, and Management

An updated edition to cover the requirements of the 2000 A Level specifications. This book is also useful as an introduction to professional accounting courses. Numerous examples and exercises.

Costing

This text covers the principles, techniques and methods involved in cost accountancy. It provides full coverage of the latest professional and college syllabuses for cost accountancy.

Life Cycle Costing

Evaluating the cost of acquiring major pieces of equipment also necessitates costing their life maintenance. Providing coverage of recent advances in this field, this book covers such topics as reliability improvement warranty, computer hardware/software costing, and reliability engineering.

Activity-based Costing and Activity-based Management for Health Care

This book applies activity-based costing and activity-based management techniques to health care in a very practical guide that offers health care administrators and students 'hands-on' forms, worksheets, report formats, examples of activity-based costing and activity-based management planning and information, and actual case studies.

Activity-Based Costing

In Activity-Based Costing: Making It Work for Small and Mid-Sized Companies, professional accountant Douglas T. Hicks shows you how to sharpen your competitive edge while bringing you the \"total package\" of cost information - not just the computational elements. Using an approach developed while solving problems for small and mid-sized companies, Mr. Hicks has created a reader-friendly, comprehensive narrative covering every aspect of the ABC industry, including step-by-step instructions for building a cost accumulation and distribution model for any size business. With examples taken from Fortune 1000 companies, readers will find a wealth of information on ABC features.

Costing for the Service Industry

A significant and innovative feature of this textbook is its detailed insights into the use of costing methodology for practical implications. It will serve to foster the reader's analytical and critical thinking skills, and it highlights both traditional and the most current practices of costing methodology using real examples drawn from the service industry. Its methodological focus will allow the reader to understand the introduction of relevant costs, their functions and their behavior towards uses and limitations of cost allocations.

Electrical Design Estimating and Costing

The Subject Electrical Design Estimating And Costing Covers An Important Functional Area Of An Electrical Diploma Holder. The Subject Is Taught In Various Forms In Different States. In Some States, It Is

Covered Under Two Subjects, Namely, Electrical Design & Drawing And Electrical Estimating & Costing. In Some States It Is Taught As An Integrated Subject But Is Split Into Two Or Three Parts To Be Taught In Different Semesters. To Cater To The Needs Of Polytechnics Of Different States, The Content Of The Course Has Been Developed By Consulting The Curricula Of Various State Boards Of Technical Education In The Country. In Addition To Inclusion Of Conventional Topics, A Chapter On Motor Control Circuits Has Been Included In This Book. This Topic Is Of Direct Relevance To The Needs Of Industries And, As Such, Finds Prominent Place In The Curricula Of Most Of The States Of India. The Book Covers Topics Like Symbols And Standards, Design Of Light And Fan Circuits, Alarm Circuits, Panel Boards Etc. Design Of Electrical Installations For Residential And Commercial Buildings As Well As Small Industries Has Been Dealt With In Detail. In Addition, Design Of Overhead And Underground Transmission And Distribution Lines, Sub-Stations And Design Of Illumination Schemes Have Also Been Included. The Book Contains A Chapter On Motor Circuit Design And A Chapter On Design Of Small Transformers And Chokes. The Book Contains Theoretical Explanations Wherever Required. A Large Number Of Solved Examples Have Been Given To Help Students Understand The Subject Better. The Authors Have Built Up The Course From Simple To Complex And From Known To Unknown. Examples Have Generally Been Taken From Practical Situations. Indeed, Students Will Find This Book Useful Not Only For Passing Examinations But Even More During Their Professional Career.

Quality Costing

Third edition of established text which provides practical advice on how to define, identify, collect, measure, analyse, report and use quality costs.

Estimating and Costing for the Metal Manufacturing Industries

This practical reference/text provides a thorough overview of cost estimating as applied to various manufacturing industries, with special emphasis on metal manufacturing concerns. It presents examples and study problems illustrating potential applications and the techniques involved in estimating costs.; Containing both US and metric units for easy conversion of world-wide manufacturing data, Estimating and Costing for the Metal Manufacturing Industries: outlines professional societies and publications dealing with cost estimating and cost analysis; details the four basic metalworking processes - machining, casting, forming, and joining; reveals five techniques for capital cost estimating, including the new AACE International's Recommended Practice 16R-90 and the new knowledge and experience method; discusses the effect of scrap rates and operation costs upon unit costs; offers four formula methods for conceptual cost estimating and examines material-design-cost relationships; describes cost indexes, cost capacity factors, multiple-improvement curves, and facility cost estimation techniques; offers a generalized metal cutting economics model for comparison with traditional economic models; and more.; Estimating and Costing for the Metal Manufacturing Industries serves as an on-the-job, single-source reference for cost, manufacturing, and industrial engineers and as a text for upper-level undergraduate, graduate, and postgraduate students in cost estimating, engineering economics, and production operations courses.; A Solutions manual to the end-of-chapter problems is available free of charge to instructors only. Requests for the manual must be made on official school stationery.

Time-Driven Activity-Based Costing

In the classroom, ABC looks like a great way to manage a company's resources. But many executives who have tried to implement ABC on a large scale in their organizations have found the approach limiting and frustrating. Why? The employee surveys that companies used to estimate resources required for business activities proved too time-consuming, expensive, and irritating to employees. This book shows you how to implement time-driven activity-based costing (TDABC), an easier and more powerful way to implement ABC. You can now estimate directly the resource demands imposed by each business transaction, product, or customer. The payoff? You spend less time and money obtaining and maintaining TDABC data—and more

time addressing problems that TDABC reveals, such as inefficient processes, unprofitable products and customers, and excess capacity. The authors also show how to use TDABC to link strategic planning to operational budgeting, to enhance the due diligence process for mergers and acquisitions, and to support continuous improvement activities such as lean management and benchmarking. In presenting their model, the authors define the two questions required to build TDABC: 1) How much does it cost per time unit to supply resource capacity for each business process? 2) How much resource capacity (time) is required to perform work for a company's many transactions, products, and customers? The book demonstrates how to develop simple, valid answers to these two questions. Kaplan and Anderson illustrate the TDABC approach with a wealth of case studies, in diverse settings, based on actual implementations.

Costing

This book addresses an important issue -- the nature of and evidence for success in the transfer costing of internal services or shared services or products within a company. The case of activity-based costing (ABC) is used to explore how the proponents have developed a framework linking Quality, Cost and Delivery (QCD) components of products and services. The QCD performance indices, which are the natural properties of products and services, will form part of the Service Level Agreements between the internal service providers (Shared Services Centers) and internal customers (Profit Centers) of the company. This framework optimizes the use of overhead expenses to the end products of the company. This book also discusses the various cost components of the products and services using the full absorption costing principle. It is a revolutionary idea in the sense that all activity costs are considered variable costs and product costs come from activity costs using various cost drivers. The Principal Component Analysis (PCA), the multi-variate statistical tool, is applied using SPSS to analyze which independent variables contribute significantly to the Product Unit Price (PUP) and which should be given more emphasis in decision making process.

Life Cycle Costing for Facilities

Compiling practical recommendations gleaned from more than 20 years of professional experience, Target Costing: Market Driven Product Design provides numerous examples from field authorities that illustrate valuable concepts and approaches employed in the application of target costing to large-scale manufacturing operations. The authors discuss setting the target product level and subsystem level, maintaining competitive costs, applying the principles of target costing in practice, and quantifying customers' needs.

Modern Product Costing Technique in the Age of Competition

Everyone jokes about the 20/20 hindsight of cost management. In Life-Cycle Costing, Jan Emblemssvag proposes to do something about it. Here's a new approach to life cycle costing that brings activity-based costing, risk, and uncertainty into the forefront. You'll focus on future costs and learn how you can perform any type of cost management activity better than before by introducing uncertainty into models and exploiting them to the max. Trade Associations and Uniform Costing in the British Printing Industry, 1900-1963

Essay from the year 2007 in the subject Business economics - Controlling, grade: 1,3, European Business School - International University Schlo Reichartshausen Oestrich-Winkel, course: Vertiefung Controlling, 8 entries in the bibliography, language: English, abstract: Contemporary times are characterized by quick, dynamic, and continuing changes in the economy. Therefore, companies have to adapt flexibly and innovatively to these changes in order to stay competitive and cope with the increasing pressure of competition. In particular, Asian and East-European competitors gain market share by offering products of better quality than in earlier times and for lower costs. Under these conditions, costs represent a fundamental factor for the success of western companies. Accordingly, management and employees have to fully exploit the potential that cost management and reduction measures offer. However, costs are not the only buying decision criterion. Customers expect products with high quality but for a low or moderate price. Correspondingly, companies have to adjust their new product developments and production systems to market requirements. This can be achieved by the Target Costing approach, a tool that is applied in more and more companies. Therefore, the aim of this essay is to explain the goals and method of Target Costing. It starts with giving some background information about Target Costing and its historical development. Chapter three describes the goals of Target Costing. Then, the Target Costing process is explained in detail. Finally, this essay concludes by discussing that Target Costing is an effective cost management tool for developing new products according to market requirements. ...]

The Book of Yields

This indispensable book presents a unique and robust solution to the problems faced by operators of efficiently investing in deteriorating water distribution networks everywhere. The deterioration of these networks affects the quality of service delivered to customers, as well as increasing costs to the service provider through the decreasing efficiency of the infrastructure. Whole life costing (WLC) aims to achieve the lowest network provisions and operating cost, when all costs are considered to achieve all statutory standards.

A Textbook of Costing Principles

Newcomers to the fashion industry often base costings on the sum of a style's fabric, trims and labor-and to that they simply add their markup. However, every other activity of the business erodes that markup, and they find themselves with an unsustainable profit-or a loss. This guide will help you avoid these pitfalls to guarantee a sustainable profit. Apparel Costing details traditional and current costing methods for the fast-paced and e-commerce-focused fashion marketplace. You will learn industry-specific product/style costing that can be applied to garments produced both locally and globally. You'll also learn how to calculate line item percentages on indirect cost factors, such as factory sourcing, overhead, administration and product development. Key topics include: Target Market Pricing; Variable vs Fixed Costs; Direct vs Indirect Cost Factors; Cost-Based vs Value-Based Costing; Domestic vs International Production Costing; Effect of Sourcing on Costing; Sustainability in Costing; Fast Fashion vs. Slow Fashion

The Target Costing Approach

What would happen if everyone in your company followed a disciplined approach to cost reduction? Go ahead -- imagine it. What would it look like? How can it be done? The answer -- smart cost management. Effective cost management must start at the design stage. As much as 90-95% of a product's costs are added in the design process. That is why effective cost management programs focus on design and manufacturing. The primary cost management method to control cost during design is a combination of target costing and value engineering. Target Costing Objectives: Identify the cost at which your product must be manufactured at if it is to earn its profit margin at its expected target selling price. Break the target cost down to its component level and have your suppliers find ways to deliver the components they sell you at the set target prices while still making adequate returns. Value Engineering: The connection to function: An organized effort and team based approach to analyze the functions of goods and services that the design stage, and find ways to achieve those functions in a manner that allows the firm to meet its target costs. The result: Added value for your company (development costs on-line with added value for your company; development costs on-line with selling prices) and added value for your customer (higher quality products that meet, possibly even exceed, customer expectations.)

Whole Life Costing for Water Distribution Network Management

Covering cost structures and cost problems as well as costing methodologies, this book, first published in 1988, aims to enhance understanding of the economics of all types of transportation: freight and passenger, by truck, rail, bus and air. beginning with an overview of transportation costing from the perspective of the carrier, user and government, Talley goes on to present the necessary information for evaluating costing methodologies. He then examines various regulatory and individual-carrier costing methodologies, and finally discusses the important new standalone-costing methodology.

This series of technical notes is produced on different topics of a national nutrition information system (NNIS) that are included in the first-ever global guidance on NNIS published in 2021. While the fundamental modules of the guidance describe the basics of a NNIS, each technical note deals with a specific topical area and presents details on those topics. The technical notes will help design and implement a NNIS and/or integrate a nutrition information system in the existing health management information system. A costing exercise is an important early step in planning a national nutrition information system. The exercise helps to specify the resources required for the successful development and implementation of an activity, i.e., the investment of resources and efforts required to build a functioning national nutrition information system. This technical note outlines key steps that countries can take to cost their nutrition information systems.

The proliferation of electronic information services has been retarded as much by the novel aspects of the pricing and accounting of resources they represent as by fear of technology or tight budgets. Library provision poses special problems as it must accommodate a mixed economy: commitment to good public services, and cost-driven financial planning. Who should be responsible for network services spread across different cost centers? What are the costs that are masked by site licensing and top-slicing? Can economic and fiscal models guide those who plan for networked services? Incorporating step-by-step instructions, problem-solving techniques and broad case study material, this practical primer will help the reader address these concerns. This text is essential reading for all information providers and suppliers of electronic services, including managers in academic and public libraries, and will also be of great interest to students of librarianship and information management.
