integrated circuits

plug into your main arduino circuit board

upload your program onto your microcontroller

configure all of the arduino hardware products

power them purely from your usb cable

reduce the voltage to five volts

connect wires here to other circuitry with 5 volts

start out by downloading the arduino software from arduino

connect the arduino to your computer with a usb cable

try plugging your arduino into a different usb port

attach the center pin of a potentiometer to pin

create a voltage anywhere from 0 to 5 volts

send serial data to our computer at 9600 bits per second

measure the voltage on pin a zero

upload it to your arduino

get a graph of the voltage your potentiometer is creating over time

connect an led from digital pin 9

use a 1k resistor

measure the voltage on a certain pin

control the brightness of an led with a potentiometer

probe the output of pin 9 with an oscilloscope

convert that square wave into a continuous analog voltage

turns the motor on at 50 percent speed for one second
