System Purpose, Inputs, and Outputs | Science Lesson - System Purpose, Inputs, and Outputs | Science Lesson 2 minutes, 58 seconds - In today's lesson we'll explore the fascinating world of systems and understand their purpose, inputs, and **outputs**,. **Systems**, are all ...

By the end of this lesson, you'll have a better grasp of how different systems work and we'll be using food processing systems as our example.

A system is a set of interconnected components working together to achieve a specific purpose or goal.

In the case of food processing systems, the purpose is to transform raw ingredients into edible products.

The purpose of a system clarifies why it exists and what it aims to achieve.

System inputs are the resources, materials, or information that a system needs to function.

These outputs are the desired outcomes of the system's operation.

To understand systems better, it's important to recognize that they consist of interconnected components.

In a food processing system, these components might include machinery, workers, quality control measures, and various stages of processing.

Imagine a food processing plant where they make canned tomato sauce.

The machinery includes conveyors, blenders, canning machines, and packaging equipment.

The example of a food processing system, like making canned tomato sauce, illustrates these principles in action.

Analog Inputs and Outputs in PLC Systems - Analog Inputs and Outputs in PLC Systems 7 minutes, 44 seconds - ?Timestamps: 00:00 - Introduction 00:43 - What is a digital signal? 01:29 - What is an analog signal? 02:07 - PLC analog input ...

Introduction

What is a digital signal?

What is an analog signal?

PLC analog input signals

Applications of analog input modules

Direct sensor connections
