Model Railroad Craftsman

Hornby is a household name with a history that goes back over 80 years. This book looks at the Hornby range in depth, and shows how Hornby models can be used to build a model railway layout to suit the space available and all levels of modelling skill. Now completely revised and updated, it is packed with hints and tips for easy layout building, scenic structure modelling, track laying and wiring and extra detailing, and provides ideas for working at the simplest level, including a layout for very young enthusiasts, through to the more experienced modeller. Extra sections relating to recent developments in the hobby are included, along with new photography, new layouts and recent additions to Hornby rolling stock and the Skaledale range.

In *Remaking the World*, James Roy King weaves together strands of thought creating a tapestry that mirrors John Dewey's pragmatism of sufficiencies. King uses the concept of activity sets - relatively stable combinations of activities that characterize every large-scale human enterprise - to explain how modeling can help people make sense of the world around them.

The *Freshwaters of Patagonia* adopts a socioecological approach, in which experts from across Patagonia review recent, scientifically rigorous literature and data of their own, thus synthesizing the current knowledge directly relevant to understand the present state and future trends of icefields, freshwater and wetland ecosystems in this region. The book's organization into three parts provides a studied and comprehensive view on the patterns and processes of the various ecosystems in Patagonia, and describes the sociological aspects of freshwater ecosystems, as well as characterizes the conservation of the freshwater and wetland ecosystems, in Patagonia. The chapters offer a broad, state-of-the-art overview of the current status of glaciers, freshwater and wetland ecosystems of this region, as well as studies of both local and large scale biodiversity patterns, and study cases of extreme and naturally polluted environments. The volume concludes with the current status of Patagonian freshwaters, and discusses the scientific, legal and administrative tools aimed at their sustainable management within the framework of the UNEP Sustainable Development Goals 2030 Agenda. A broad audience of students, scientists, engineers, environmental managers, and policy makers will be interested in this volume.

PiNiLATUM ANALYTICA publishes statistical analyzes for the online markets of model railways, model railroads and model trains. For this, we use the data base of eBay Inc. for United States, Great Britain, Canada and Australia. We analyze the quantities sold, categorized by country, gauge, scale, product group, manufacturer and brand. In our analysis, we consider only the product group "Rolling Stock", that means spare parts, accessories, general products for railway modelling or model railroading, tracks, switches, etc. are not part of the analysis. In a further analysis, we checked which manufacturers or which brands are most frequently sold in the product categories locomotives, freight cars, carriages, passenger cars, coaches and starter packs. Once again, we differentiate between new articles and used articles, whereby we restrict ourselves only to those products that were clearly assigned to a specific manufacturer or brand.

Steam Locomotive Projects & Ideas

Now available in paperback, this is the first academic book to study railway enthusiasts in Britain. Far from a trivial topic, the post-war train spotting craze swept most boys and some girls into a passion for railways, and for many, ignited a lifetime's interest. British railway enthusiasm traces this post-war cohort, and those which followed, as they invigorated different sectors in the world of railway enthusiasm – train spotting, railway modelling, collecting railway relics – and then, in response to the demise of main line steam traction, Britain's now-huge preserved railway industry. Today this industry finds itself riven by tensions between preserving a loved past which ever fewer people can remember and earning money from tourist visitors. The widespread and enduring significance of railway enthusiasm will ensure that this groundbreaking text remains a key work in transport studies, and will appeal to enthusiasts as much as to students and scholars of transport and cultural history.

PiNiLATUM ANALYTICA prepara análisis estadísticos para el mercado en línea para el modelismo ferroviario o ferromodelismo. Para esto utilizamos la base de datos de la empresa eBay Inc. para España. Analizamos los artículos vendidos, clasificadas por país, por escala, por grupo de productos y por fabricante y marca. Solo analizamos el grupo de productos “Material Rodante”. Por lo tanto, las piezas de repuesto, accesorios, productos generales para el modelismo ferroviario, vías, interruptores, etc. no son parte del análisis. En un análisis posterior, verificamos qué fabricantes o qué marcas se venden con mayor frecuencia en las categorías de productos: locomotoras, vagones de mercancías, vagones de pasajeros y cajas de iniciación. Una vez más, separamos los artículos en “ferromodelismo nuevo” y “ferromodelismo usado”. Nos limitamos solo a los productos vendidos que se asignaron claramente a un fabricante o marca durante el período de análisis.
