The Handbook of Inorganic Compounds consists of basic chemistry data for more than 3000 selected gases, liquids, and solid compounds. The compounds are listed alphabetically and indexes located at the back of the book provide the CAS Registry number, molecular formula, and name/synonym. The format for presenting information has both numerical data and descriptive information. The data include: Molecular weight Melting and boiling points Solubility Density Viscosity Hardness Vapor pressure Reactivity Thermal conductivity Thermal expansion coefficient Lattice parameters Electrical resistivity Poisson's ratio Dielectric constant The material in this work includes the mainly the chemical elements, binary compounds of the elements with anions such as sulfate and chloride, and metal salts of some simple organic acids. If a compound has more than one form, then each form may be listed individually. If you need: property data for compounds, CAS RN numbers for computer or other searches, a consistent tabulation of molecular weights, to synthesize inorganic materials on a laboratory scale, information on commercial and other uses for many compounds then the Handbook of Inorganic Compounds is the perfect reference to have on your shelf.

Environmental policy aims at the transition to sustainable production and consumption. This is taking place in different ways and at different levels. In cases where businesses are continuously active to improve the environmental performance of their products and activities, the availability of knowledge on environmental impacts is indispensable. The integrated assessment of all environmental impacts from cradle to grave is the basis for many decisions relating to achieving improved products and services. The assessment tool most

widely used for this is the environmental Life Cycle Assessment, or LCA. Before you is the new Handbook of LCA replacing the previous edition of 1992. New developments in LCA methodology from all over the world have been discussed and, where possible, included in this new Handbook. Integration of all developments into a new, consistent method has been the main aim for the new Handbook. The thinking on environment and sustainability is, however, quickly evolving so that it is already clear now that this new LCA Handbook does not embrace the very latest developments. Therefore, further revisions will have to take place in the future. A major advantage of this Handbook is that it now also advises which procedures should be followed to achieve adequate, relevant and accepted results. Furthermore, the distinction between detailed and simplified LCA makes this Handbook more broadly applicable, while guidance is provided as to which additional information can be relevant for specialised applications.

The volume covers binary amalgams of all the metals, together with those of carbon, silicon and boron, a total of 76 systems. Complete literature coverage extends through 1983. The emphasis is on accurate, evaluated solubility data, but phase diagrams have been included where they have been defined, and will aid the reader in assigning the solid-liquid equilibrium. The data have been critically evaluated, and are classified as 'recommended' when independent determinations agree within experimental error. The data may also be used to compute thermodynamic properties of the binary components.

Authored by two longtime researchers in tobacco science, *The Chemical Components of Tobacco and Tobacco Smoke*, Second Edition chronicles the progress made from late 2008 through 2011 by scientists in the field of tobacco science. The book examines the isolation and characterization of each component. It explores developments in pertinent analytical technology and results of experimental studies on biological activity, toxicity, and tumorigenicity, including the inhibition of adverse biological activity of one specific tobacco smoke component by another tobacco smoke component. Adding to the progress reported in the First Edition, the comprehensive Second Edition provides nearly 7,000 references on almost 9,600 components. The authors discuss the controversies over the extrapolation of the biological effect of a specific component administered individually by one route versus its biological effect when the component is in a highly complex mixture and is administered by a different route. They also cite studies in which cigarette design technologies were developed to control the per-cigarette mainstream smoke yield of Federal Trade Commission-defined tar and one or more specific tobacco smoke components of concern. New in the Second Edition: Approximately 1,000 newly reported components have been inserted and several dozen duplicates have been deleted from various tables and from the Alphabetical Index Improved and sharper chemical structures Insertion of new pertinent references for the components in each of the major chapter tables devoted to a particular functional component Updated Index organized by the CAS Registry Number listing of the components Updated discussions in the Introduction and at the beginning of each chapter A searchable companion CD-ROM containing the 350-page alphabetical Component Index Authors Alan Rodgman and Thomas A. Perfetti were jointly awarded the 2010 CORESTA (Cooperative Centre for Scientific Research Relative to Tobacco) Prize for their extensive work on documenting the vast literature on the chemical composition of tobacco and tobacco smoke in their original edition.

National Toxicology Program Annual Report for Fiscal Year ...

Get a FREE first edition facsimile with each copy of the 85th! Researchers around the world depend upon having access to authoritative, up-to-date data. And for more than 90 years, they have relied on the CRC Handbook of Chemistry and Physics for that data. This year is no exception. New tables, extensive updates, and added sections mean the Handbook has again set a new standard for reliability, utility, and thoroughness. This edition features a Foreword by world renowned neurologist and author Oliver Sacks, a free facsimile of the 1913 first edition of the Handbook, and thumb tabs that make it easier to locate particular data. New tables in this edition include: Index of Refraction of Inorganic Crystals Upper and Lower Azeotropic Data for Binary Mixtures Critical Solution Temperatures of Polymer Solutions Density of Solvents as a Function of Temperature By popular request, several tables omitted from recent editions are back, including Coefficients of Friction and Miscibility of Organic Solvents. Ten other sections have been substantially revised, with some, such as the Table of the Isotopes and Thermal Conductivity of Liquids, significantly expanded. The Fundamental Physical Constants section has been updated with the latest CODATA/NIST values, and the Mathematical Tables appendix now features several new sections covering topics that include orthogonal polynomials Clebsch-Gordan coefficients, and statistics.

Review of Current DHHS, DOE, and EPA Research Related to Toxicology

Compiled by an expert in the field, the book provides an engineer with data they can trust. Spanning gases, liquids, and solids, all critical properties (including viscosity, thermal conductivity, and diffusion coefficient) are covered. From C1 to C100 organics and Ac to Zr inorganics, the data in this handbook is a perfect quick reference for field, lab or classroom usage. By collecting a large – but relevant – amount of information in one source, the handbook enables engineers to spend more time developing new designs and processes, and less time collecting vital properties data. This is not a theoretical treatise, but an aid to the practicing engineer in the field, on day-to-day operations and long range projects. - Simplifies research and significantly reduces the amount of time spent collecting properties data - Compiled by an expert in the field, the book provides an engineer with data they can trust in design, research, development and manufacturing - A single, easy reference for critical temperature dependent properties for a wide range of hydrocarbons, including C1 to C100 organics and Ac to Zr inorganics

RCRA Regulations and Keyword Index, 2016 Edition

A very comprehensive bibliographical reference to international, national, and local literature on plant conservation - with over 10,000 references, arranged by country. A standard reference tool for anyone dealing with any aspect of plant conservation.

RCRA Regulations and Keyword Index, 2017 Edition

The popular first edition of this book contained approximately 600 analyte/method summaries. This new edition contains twice as many new EPA-approved methods for testing and analyzing industrial chemicals, pesticides, herbicides, dioxins, and PCBs and is a printed version of the EPA's Sampling and Analysis Methods Database. Each analyte/method summary contains all of the information required to stand alone as a reference. Thus, in addition to a brief summary of each method, descriptions include required instrumentation, interferences, sampling containers, preservation techniques, maximum holding times, detection levels, accuracy, precision, quality control requirements, EPA reference, and, when available, EPA contacts with phone numbers. Each summarized report is a \"stand-alone\" document.
