

# What Are Binary And Hexadecimal Numbers

## Binary number

A binary number is a number expressed in the base-2 numeral system or binary numeral system, a method for representing numbers that uses only two symbols...

## Binary code

decimal or hexadecimal notation. There are many character sets and many character encodings for them. A bit string, interpreted as a binary number, can...

## Double-precision floating-point format (redirect from 64-bit binary floating-point format)

binary floating-point is a commonly used format on PCs, due to its wider range over single-precision floating point, in spite of its performance and bandwidth...

## 0 (section Symbols and representations)

no tens, and five ones. The same principle applies in place-value notations that uses a base other than ten, such as binary and hexadecimal. The modern...

## Binary file

data as a sequence of hexadecimal (or decimal, binary or ASCII character) values for corresponding bytes of a binary file. If a binary file is opened in a...

## Base64 (category Binary-to-text encoding formats)

Hexadecimal to octal transformation is useful to convert between binary and Base64. Such conversion is available for both advanced calculators and programming...

## 1 (section Symbols and representation)

technology, data is represented by binary code, i.e., a base-2 numeral system with numbers represented by a sequence of 1s and 0s. Digitised data is represented...

## Floating-point arithmetic (redirect from Binary floating point)

mainframes support IBM's own hexadecimal floating point format and IEEE 754-2008 decimal floating point in addition to the IEEE 754 binary format. The Cray T90...

## Single-precision floating-point format (redirect from 32-bit binary floating-point format)

examples are given in bit representation, in hexadecimal and binary, of the floating-point value. This includes the sign, (biased) exponent, and significand...

## **IEEE 754 (redirect from IEEE Standard 754 floating-point numbers)**

for Testing IEEE Decimal–Binary Conversion, Manuscript, CiteSeerX 10.1.1.144.5889 IEEE 754 2008, §5.12.3 &quot;6.9.3. Hexadecimal floating point literals —...

## **Numerical digit (section Palindromic numbers and Lychrel numbers)**

(0 to 9), and binary (base 2) requires only two digits (0 and 1). Bases greater than 10 require more than 10 digits, for instance hexadecimal (base 16)...

## **List of numbers**

notable numbers and articles about notable numbers. The list does not contain all numbers in existence as most of the number sets are infinite. Numbers may...

## **CPC Binary Barcode**

below and record the hexadecimal numbers that they correspond to. (e.g. K1-A-0-B1 becomes 32-07-A-C2.) Convert those hex numbers to binary, and add leading...

## **Metric prefix (redirect from Demi (binary prefix))**

in which M means 1000. Binary prefix – Prefix indicating a power of  $2^{10}$  (1,024) CJK Compatibility E1 series (preferred numbers) – Series of preferred...

## **Dot-decimal notation (section Version numbers)**

numerical data expressed as a string of decimal numbers each separated by a full stop. For example, the hexadecimal number 0xFF000000 may be expressed in dot-decimal...

## **Numeral (linguistics) (redirect from Names of numbers)**

Tolkien's Elvish languages, which used duodecimal as well as decimal. Hexadecimal systems are based on the number 16. The traditional Chinese units of measurement...

## **Ternary numeral system (redirect from Binary–coded ternary)**

representation of ternary, similar to how octal and hexadecimal systems are used in place of binary. In certain analog logic, the state of the circuit...

## **Byte (redirect from Peta binary byte)**

a nibble, also nybble, which is conveniently represented by a single hexadecimal digit. The term octet unambiguously specifies a size of eight bits. It...

## **Irrational number (redirect from Irrational numbers)**

mathematics, the irrational numbers are all the real numbers that are not rational numbers. That is, irrational numbers cannot be expressed as the ratio...

## Character encoding (category Natural language and computing)

Assigned Numbers Authority (IANA) Characters and encodings, by Jukka Korpela Unicode Technical Report #17: Character Encoding Model Decimal, Hexadecimal Character...
