

Lifetimes

Lifetimes

When the death of a relative, a friend, or a pet happens or is about to happen . . . how can we help a child to understand? Lifetimes is a moving book for children of all ages, even parents too. It lets us explain life and death in a sensitive, caring, beautiful way. Lifetimes tells us about beginnings. And about endings. And about living in between. With large, wonderful illustrations, it tells about plants. About animals. About people. It tells that dying is as much a part of living as being born. It helps us to remember. It helps us to understand. Lifetimes . . . a very special, very important book for you and your child. The book that explains—beautifully—that all living things have their own special Lifetimes.

Lifetimes

Explains that different plants and animals have different lifespans and grow up at different rates

Two Lifetimes

This remarkable book is written to help people move out of being run by their wounded emotional child to being run by their empowered authentic adult self. It chronicles shifting from living life fearfully to living life powerfully and lovingly. It will change your life.

Beamtimes and Lifetimes

The unique breed of particle physicists constitutes a community of sophisticated mythmakers--explicators of the nature of matter who forever alter our views of space and time. But who are these people? What is their world really like? Sharon Trawick, a bold and original observer of culture, opens the door to this unusual domain and offers us a glimpse into the inner sanctum.

Separate Lifetimes

Now in its fourth printing, this book contains Irving Townsend's classic animal essays first published in Harper's Magazine, Country Journal and Reader's Digest. Separate Lifetimes has continued to surprise and delight animal lovers since 1986.

Parallel Lifetimes

Part of Ramtha Fireside Series on the topic of parallel universes and creating dramatic change in our life using the principles of quantum physics. \"A shift in quantum state brings a parallel lifetime, and now everything in that lifetime is different. The relationship to you and your environment is lifted, for what compelled you before is not a compelling influence in the new shift. You are now in a parallel existence. In the parallel existence our mind does not leave our body behind in the old state but rather the body can also live in parallel existences because it is made of quantum material. It is now shifted into the new hall, the new life, and everything is different. What becomes apparent is that the climax that governed your life once before is now at rest. The old climax is not apparent in the new life and its influences are not seen in people, places, things, times, and events. That is the truth. This knowledge is the key to the kingdom of heaven.\" - Ramtha For more information about Ramtha and his original international school of the mind and ancient wisdom, offering courses live and online around the world for the last 4 decades, visit: Ramtha.com

The LAMA of MANY LIFETIMES (Tibetan Translation)

Tibetan translation by Tulku Yeshe Rinpoche of Book One (1937-1958) and part of Book Two (1958-1980) of the English original work of the same title by Sue-Sue (Tâm B'ô ?àn)

Lifetimes of Commitment

Explores the ways in which political belief is developed and sustained throughout the course of a lifetime. Through interviews, it focuses on the lives of 15 British men and women, aged between 70 and 90, who have dedicated half a century or longer to working for social change and justice.

Beginnings and Endings with Lifetimes in Between

Book intended for children which explains death by presenting life as having a beginning and an end, with an appropriate 'lifetime' in between. The length of this lifetime varies according to the type of living thing and is affected by illness and injury. The illustrator was awarded the Hans Christian Andersen Medal in 1986.

Discovering Your Past Lives

A thorough exploration of how looking into past lives can contribute to finding greater meaning and purpose in the present.

Lifetimes Ago

A modern-day couple discovers through past life regression that their lives were once intertwined and unintentionally uncover a passionate 1930s love story.

The Deadline Effect

In the tradition of Charles Duhigg's *The Power of Habit*, a wise and fascinating book that shows us how "we can make deadlines work for us instead of the other way around" (*The Wall Street Journal*). Perfectionists and procrastinators alike agree—it's natural to dread a deadline. Whether you are completing a masterpiece or just checking off an overwhelming to-do list, the ticking clock signals despair. Christopher Cox knows the panic of the looming deadline all too well—as a magazine editor, he has spent years overseeing writers and journalists who couldn't meet a deadline to save their lives. After putting in a few too many late nights in the newsroom, he became determined to learn the secret of managing deadlines. He set off to observe nine different organizations as they approached a high-pressure deadline. Along the way, Cox made an even greater discovery: these experts didn't just meet their big deadlines—they became more focused, productive, and creative in the process. An entertaining blend of "behavioral science, psychological theory, and academic studies with compelling storytelling and descriptive case studies" (*Financial Times*), *The Deadline Effect* reveals the time-management strategies these teams used to guarantee success while staying on schedule: a restaurant opening for the first time, a ski resort covering an entire mountain in snow, a farm growing enough lilies in time for Easter, and more. Cox explains how to use deadlines to our advantage, the dynamics of teams and customers, and techniques for using deadlines to make better, more effective decisions.

The Lifetimes When Jesus and Buddha Knew Each Other

These stories about the multiple shared lifetimes of Jesus and the Buddha's reincarnations offer startling revelations about the universe, *A Course in Miracles*, and the path to enlightenment. Two and a half decades ago, Ascended Master Teachers Arten and Pursah appeared to Gary Renard and held a series of conversations with him that elaborated on the teachings of two spiritual classics, *The Gospel of Thomas* and

A Course in Miracles. Gary immortalized what he learned in the books of his best-selling series: The Disappearance of the Universe, Your Immortal Reality, and Love Has Forgotten No One. This fourth book is a companion to the original trilogy, yet written to stand alone—an invitation for new readers into this fascinating work. This book explores six of the lifetimes in which the incarnations of Jesus and Buddha lived together, beginning in 700 B.C. when they were known as Saka and Hiroji. Through the spiritual lessons that Jesus and Buddha learn on their path, Arten and Pursah clarify the difference between duality and nonduality. When you are able to internalize these lessons, you will be saved countless years in your spiritual development.

Inseparable across Lifetimes

Winner of a 2021 Kayden Translation Award A true story of love, separation, and rediscovery in a time of cultural and spiritual upheaval in Tibet. An inspiring and intimate tale set against the turmoil of recent Tibetan history, Inseparable across Lifetimes offers for the first time the translations of love letters between two modern Buddhist visionaries. The letters are poetic, affectionate, and prophetic, articulating a hopeful vision of renewal that drew on their past lives together and led to their twenty-year partnership. This couple played a significant role in restoring Buddhism in the region of Golok once China's revolutionary fervor gave way to reform. Holly Gayley, who was given their correspondence by Namtrul Rinpoche himself, has translated their lives and letters in order to share their remarkable story with the world.

Power Of Alpha, The: Electron Elementary Particle Generation With Alpha-quantized Lifetimes And Masses

This book is centered on the most pressing unsolved problem in elementary particle physics — the mass generation of particles. It contains physics that is not included in the Standard Model as it is now formulated, while at the same time being in conformity with the major results of the Standard Model, i.e. isotopic spins and interactions. It differs from the Standard Model in the treatment of masses and pseudoscalar mesons, and in the role assigned to the coupling constant α . Presented in a careful and phenomenological way, the material can easily be followed by all physicists, both experimental and theoretical, and also by interested workers in other fields. The author's website — 70mev.org — gives additional information about the applications of the constant α in particle physics.

Many Lifetimes

Joan Grant is recognized world wide for her stunning ability to remember the events of previous lives with as much lucidity as an episode from last week. Denys Kelsey, Joan's third husband, was a well-established psychiatrist when they first met. After marrying, they worked together to understand the deeper currents affecting some of Kelsey's patients, based on Joan's insights into past lives. The result is Many Lifetimes.

Lifetimes - True Accounts of Reincarnation

A person you've never met before seems strangely familiar... You seem to have intense memories - of a place you've never been... You have an experience you know is new - but it feels as if it's happened before... For many people, reincarnation is a reality. In this stunning and unusual book, Dr. Frederick Lenz brings together men and women from all walks of life who vividly and with great conviction describe experiences and relationships from previous... LIFETIMES.

Lifetimes

Fifteen years ago while studying energy healing, Marilyn Kaufman found herself in a spontaneous past life. The incredible experience left her wondering what other lifetimes could be influencing her current existence.

And so she began an introspective journey to find out more. After gaining a better understanding of the experience, Marilyn began studying hypnosis and regression therapy, and eventually incorporated the techniques into her existing energy healing practice. While guiding her clients down an enlightening path through past lives, into the in between, and to connect to their Spirit guides, Marilyn learned much about the purpose of life. By sharing her insights, Marilyn helps others who may be awakening or searching for meaning in their lives to embrace the power of past life regression therapy to move through challenging obstacles, explore and heal relationships, and realize their true life's purpose. Lifetimes shares fascinating personal stories of an empath's journey and related experiences with past life regression as she achieved peace, gained eternal knowledge, and went on to guide others down a path of self-actualization.

PLATE: Product Lifetimes And The Environment

Product lifetimes are critical for the circular economy, resource efficiency, waste reduction and low carbon strategies for sustainability, and are therefore of interest to academics from many different disciplines as well as original equipment manufacturers (OEMs) and other stakeholders. The challenges related to product lifetimes must be tackled from multiple perspectives, making the sharing of knowledge and expertise from different disciplines particularly important. This book presents papers from the second Product Lifetime and the Environment (PLATE) conference, held in Delft, the Netherlands, in November 2017. The conference originated from the desire to bring together academic researchers working in the field of sustainability to benefit from each other's knowledge and further advance the field. The book includes the 88 full papers delivered at the conference, grouped according to the following 7 conference themes: design for product longevity; product lifetime optimization; cultural perspectives on the throwaway society; circular economy and product lifetimes; business opportunities, economic implications and marketing strategies; consumer influences on product lifetimes; and policy, regulation and legislation. The book will be of interest to all those concerned with sustainable consumption, circular economy and resource efficiency.

Turning the Pages

It's one thing to live an extraordinary life but another to live multiple lifetimes.

Good Leaders Learn

How do leaders learn to lead? How do leaders set themselves up for success? This book explores the real-life experiences of a wide variety of leaders from different industries, sectors, and countries to bring to light new lessons on the importance of life-long learning. Consisting primarily of a series of probing interviews, Good Leaders Learn presents the challenges, triumphs, and reflections of 31 senior and high-profile leaders, offering insight into how they learned to lead during their careers. The book pulls important and useful perspectives into a robust theoretical framework that includes the importance of innate curiosity, challenging oneself, risk-taking, and other key elements of good leadership. With practical insights complemented by the latest leadership research and theory, this book will help current and potential leaders to build a solid foundation of the leadership qualities vital to their continuing success.

Lifetime Spectroscopy

Lifetime spectroscopy is one of the most sensitive diagnostic tools for the identification and analysis of impurities in semiconductors. Since it is based on the recombination process, it provides insight into precisely those defects that are relevant to semiconductor devices such as solar cells. This book introduces a transparent modeling procedure that allows a detailed theoretical evaluation of the spectroscopic potential of the different lifetime spectroscopic techniques. The various theoretical predictions are verified experimentally with the context of a comprehensive study on different metal impurities. The quality and consistency of the spectroscopic results, as explained here, confirms the excellent performance of lifetime spectroscopy.

The Lama of the Many Lifetimes

Biography of a Tibetan lama who was imprisoned at the age of 21 following the Chinese invasion of Tibet. He met his karmic teacher while in prison and received many profound teachings from him and was able to transform all his hatred and anger into pristine love and wisdom. He is now a symbol of selflessness and compassion and is known worldwide as a lama of vast love and wisdom.

For Seven Lifetimes

How to cultivate a successful marriage based on shared values and spiritual growth • With new chapters on their past 15 years together, stories of happy marriages modeled on the book, marital “obedience,” and the family way to world peace • Reveals how a couple can become an engine for higher spiritual experiences • Includes more than 60 letters written between the authors during their courtship and over 100 full-color photographs, including their traditional wedding in India Defying the norms of her culture and tradition, a highly educated Tamil Brahmin woman decides to arrange her own marriage. Simultaneously, an American book publisher--disillusioned with love in the Western world--looks to India to find a wife by placing an ad in an Indian newspaper. A dialogue between two souls, two families, and two cultures, *For Seven Lifetimes* chronicles the year-long written courtship of this pair as they share their beliefs on sexuality, desire, gender roles, careers, parenthood, spirituality, and religion. By appreciating the similarities and differences in their worldviews, they initiate a union that reflects their ideals as a couple and the life they will create together. Revealing the secrets to a fulfilling relationship based on shared values and spiritual growth, Vatsala and Eshud outline the principles needed to truly understand the roles of husband and wife and the questions to ask to recognize true spiritual compatibility. With new chapters on the 15 years since their wedding day, stories of happy marriages inspired by and modeled on the book, marital “obedience,” and how a couple can become an engine for higher spiritual experiences, this new edition shows how the successful marriage reflects the greater union between the masculine and the feminine.

The Opportunities of a Lifetime

This report uses a revolutionary new research tool, LOIS (the Lifetime Opportunity and Incentives Simulation programme), to assess the impact of current government social policy on our lives from cradle to grave. The strengths and weaknesses of the British benefit, pension and taxation systems are analysed in terms of how well they meet, or are likely to meet, the needs of individuals throughout their lifetimes. Specific government promises, such as those to end child and pensioner poverty and to reward those who work, are also reassessed in this context. The opportunities of a lifetime is compulsory reading for social policy academics, researchers, analysts, students and policy makers who will find the innovative lifetime analysis invaluable. With brief and clear descriptions of the technical aspects of taxation, pensions and benefits, the report is also accessible to a wider readership.

Analyses for Durability and System Design Lifetime

An issue in engineering design is a system's design lifetime. Economists study durability choice problems for consumer goods but seldom address lifetime problem(s) of complex engineering systems. The issues for engineering systems are complex and multidisciplinary and require an understanding of the 'technicalities of durability' and the economic implications of the marginal cost of durability and value maximization. Commonly the design lifetime for an infrastructure is set between 30 and 70 years. Satellite lifetimes are also assigned arbitrarily or with limited analysis. This book provides a systemic qualitative and quantitative approach to these problems addressing, first, the technicality of durability, second, the marginal cost of durability, and third, the durability choice problem for complex engineering systems with network externalities (competition and market uncertainty) and obsolescence effects (technology evolution). Since the analyses are system-specific, a satellite example is used to illustrate the essence and provide a quantitative

application of said analyses.

Love for Two Lifetimes

Following clues in years of unsent love letters after her mother's death, Izzy steps into a world of English royalty in search of her father and falls in love with a young aristocrat-only to discover he may be her brother. A tale of two generations of love revealed in prose, texts, and love letters.

Recycling and Lifetime Management in the Textile and Fashion Sector

This book provides a wide landscape for recycling and product lifetime management in the textile and fashion sector. Through this approach, the book attempts to deepen the understanding of the sustainability transformation, which is currently desperately needed but also already happening in the design, manufacture, consumption and recycling of textiles and garments. The textile and garment recycling and redefining product lifetimes of this transformation are at the core of the new understanding of sustainability. An accessible and compelling read, *Recycling and Lifetime Management in the Textile and Fashion Sector* will appeal to students, scholars, professionals, policy makers and industry practitioners.

Lifetime Factors in Silicon

During the past two decades, there has been an increasing appreciation of the significant value that lifetime-based techniques can add to biomedical studies and applications of fluorescence. Bringing together perspectives of different research communities, *Fluorescence Lifetime Spectroscopy and Imaging: Principles and Applications in Biomedical Diagnostics* explores the remarkable advances in time-resolved fluorescence techniques and their role in a wide range of biological and clinical applications. Broadly accessible, the book captures the state-of-the-art of fluorescence lifetime metrology and imaging and provides current perspectives on their applications to biomedical studies of intact tissues and medical diagnosis. The text introduces these techniques within the wider context of fluorescence spectroscopy and describes basic principles underlying current instrumentation for fluorescence lifetime imaging and metrology (FLIM). It also covers the wide range of methods, including single channel (point) spectroscopy, fluorescence lifetime imaging microscopy, and single- and multi-photon excitation. Edited by pioneers in this field, with contributions from leading experts, the book includes an overview of complementary techniques that help researchers beginning FLIM research. It offers a comprehensive treatment of fundamental principles, instrumentation, analytical methods, and applications. It also provides an overview of the label-free contrast available from lifetime measurements of tissue autofluorescence and the prospects for exploiting this for clinical applications and biomedical research including drug discovery.

Fluorescence Lifetime Spectroscopy and Imaging

The results of short-time elevated-temperature creep tests of 75S-T6 aluminum-alloy columns are presented and examined with the objective of obtaining procedures for predicting column lifetime. Semiempirical lifetime curves are obtained with the aid of a previously published column creep theory and are used for deriving column curves. The semiempirical lifetime curves are also used to study the effect of varying applied stress and out-of-straightness. In the range considered, small variations of out-of-straightness are found to be of little practical significance; whereas, small stress variations change column lifetime considerably. For the range of out-of-straightness encountered in the tests, the data can be presented in plots that do not explicitly include out-of-straightness, and plots of this type should be satisfactory for predicting column lifetime for design purposes.

An Investigation of the Creep Lifetime of 75S-T6 Aluminum-alloy Columns

This innovative book addresses the historical development of social and fiscal policies from the late 1970s to the present day by asking what has changed, how these changes have affected the lifecourse and what the potential lifetime impacts of policy change are. This book provides an overview of the development of policy change over the period and uses an innovative and unique lifetime approach \"from the cradle to the grave\" to put it into perspective. The authors begin by reviewing the political changes and policy story since the 1970s and demonstrate the economic and social changes that have occurred alongside. The book then takes an innovative approach in looking at specific programmes about crucial aspects of the lifecycle - from maternity and childhood, through to adult events and risks before finally looking at retirement, survivorship and death. Finally, profiles of three hypothetical \"families\" - the Meades, who are median earners, the Moores, high earners and the Lowes who are low paid - are developed for 1979, 1997 and 2008 to provide a comprehensive discussion of policy change and make innovative insights for the future. This is the first book to join up the history of policy direction with an analysis of outcomes over the whole period. It will therefore be ideal for students of social policy and attract a wide readership interested in pensions, children's support and related issues.

Influence of Material and Testing Parameters on the Lifetime of TBC Systems with MCrAlY and NiPtAl Bondcoats

This monograph focuses on modern femtosecond laser microscopes for two photon imaging and nanoprocessing, on laser tweezers for cell micromanipulation as well as on fluorescence lifetime imaging (FLIM) in Life Sciences. The book starts with an introduction by Dr. Wolfgang Kaiser, pioneer of nonlinear optics and ends with the chapter on clinical multiphoton tomography, the novel high resolution imaging technique. It includes a foreword by the nonlinear microscopy expert Dr. Colin Sheppard. Contents Part I: Basics Brief history of fluorescence lifetime imaging The long journey to the laser and its use for nonlinear optics Advanced TCSPC-FLIM techniques Ultrafast lasers in biophotonics Part II: Modern nonlinear microscopy of live cells STED microscopy: exploring fluorescence lifetime gradients for super-resolution at reduced illumination intensities Principles and applications of temporal-focusing wide-field two-photon microscopy FLIM-FRET microscopy TCSPC FLIM and PLIM for metabolic imaging and oxygen sensing Laser tweezers are sources of two-photon effects Metabolic shifts in cell proliferation and differentiation Femtosecond laser nanoprocessing Cryomultiphoton imaging Part III: Nonlinear tissue imaging Multiphoton Tomography (MPT) Clinical multimodal CARS imaging In vivo multiphoton microscopy of human skin Two-photon microscopy and fluorescence lifetime imaging of the cornea Multiscale correlative imaging of the brain Revealing interaction of dyes and nanomaterials by multiphoton imaging Multiphoton FLIM in cosmetic clinical research Multiphoton microscopy and fluorescence lifetime imaging for resection guidance in malignant glioma surgery Non-invasive single-photon and multi-photon imaging of stem cells and cancer cells in mouse models Bedside assessment of multiphoton tomography

A generation of change, a lifetime of difference?

The official book on the Rust programming language, written by the Rust development team at the Mozilla Foundation, fully updated for Rust 2018. The Rust Programming Language is the official book on Rust: an open source systems programming language that helps you write faster, more reliable software. Rust offers control over low-level details (such as memory usage) in combination with high-level ergonomics, eliminating the hassle traditionally associated with low-level languages. The authors of The Rust Programming Language, members of the Rust Core Team, share their knowledge and experience to show you how to take full advantage of Rust's features--from installation to creating robust and scalable programs. You'll begin with basics like creating functions, choosing data types, and binding variables and then move on to more advanced concepts, such as: Ownership and borrowing, lifetimes, and traits Using Rust's memory safety guarantees to build fast, safe programs Testing, error handling, and effective refactoring Generics, smart pointers, multithreading, trait objects, and advanced pattern matching Using Cargo, Rust's built-in package manager, to build, test, and document your code and manage dependencies How best to use Rust's advanced compiler with compiler-led programming techniques You'll find plenty of code examples

throughout the book, as well as three chapters dedicated to building complete projects to test your learning: a number guessing game, a Rust implementation of a command line tool, and a multithreaded server. New to this edition: An extended section on Rust macros, an expanded chapter on modules, and appendixes on Rust development tools and editions.

Multiphoton Microscopy and Fluorescence Lifetime Imaging

“IN THIS THIRD ACT OF MY LIFE, MUCH HAS BECOME CLEARER. SO MUCH IS OVER, AND I AM OVER SO MUCH . . .” At a certain time in life, we all come to realize what is truly important to us and what just doesn’t matter. For Shirley MacLaine, that time is now. In this wise, witty, and fearless collection of small observations and big-picture questions, she shares with readers all those things that she is over dealing with in life, in love, at home, and in the larger world . . . as well as the things she will never get over, no matter how long she lives. Among the things that Shirley is over: people who repeat themselves (“when you didn’t care what they said the first time”); conservatives and liberals; ill-mannered young people; the poison of celebrity (“Why do so many people want to be famous when they see how it can destroy your life?”); being polite to boring people (“If they won’t stop talking, I go into a trance and meditate”); getting older in Hollywood (“How peaceful it is not to have to look particularly pretty anymore or to wear a size 6”). In the opposite camp, there are some things Shirley will never get over: good lighting (“Marlene Dietrich taught me how to light myself”); gorgeous costars (“The vanity of male actors is an impossible wall to scale”); performing live (“Yes, it is better than sex”); and above all, brave people with curious minds (“Fear is the most powerful weapon of mass destruction”). Along the way, she recalls stories of some of the true greats she has known—Alfred Hitchcock, Elizabeth Taylor, Frank Sinatra, the two Jacks (Lemmon and Nicholson)—and ruminates on the state of Hollywood past and present. She recollects her relationships and romances with politicians (including two prime ministers), scientists, journalists, and costars. An unabashed seeker of truth and unrepentant free spirit, Shirley looks squarely at a world that can irritate, confuse, and provoke her, but that can also delight her with its beauty, humor, and future promise. Reading *I’m Over All That* will make you feel you have been reunited with an old friend who tells it like it is but never takes herself too seriously. Shirley MacLaine may be over all that, but this irresistible book ensures that we will never get over her.

The Rust Programming Language (Covers Rust 2018)

The alloy system AlGaAs/GaAs is potentially of great importance for many high-speed electronics and optoelectronic devices, because the lattice parameter difference GaAs and AlGaAs is very small, which promises an insignificant concentration of undesirable interface states. Thanks to this prominent feature, a number of interesting properties and phenomena, such as high-mobility low-dimensional carrier gases, resonant tunnelling and fractional quantum Hall effect, have been found in the AlGaAs/GaAs heterostructure system. New devices, such as modulation-doped FETs, heterojunction bipolar transistors, resonant tunnelling transistors, quantum-well lasers, and other photonic and quantum-effect devices, have also been developed recently using this material system. These areas are recognized as not being the most interesting and active fields in semiconductor physics and device engineering.

I'm Over All That

Make Rust a key tool in your arsenal, and access one of the industry's fastest-growing areas of opportunity. Rust's exciting innovations have made it the most loved programming language in Stack Overflow's influential survey for five straight years--but its steep learning curve has made many other developers reluctant to dive in. Now, with a growing commitment to Rust from many of the world's leading development organizations, it's the perfect time to start--especially now that there's an up-to-date, accessible, example-rich book to guide you. In *Programming with Rust*, long-time enterprise developer Donis Marshall has made Rust easier to understand than ever, with a guide expertly organized into short, bite-sized chapters that bring you up-to-speed fast. Written for developers at all levels, Marshall starts with the absolute basics, and thoroughly

demystifies the Rust technical advances that make it so attractive for next-generation development. Everything's here, from types and assignments to ownership, lifetimes, traits, and crates. Marshall even offers indispensable expert advice for unit testing, handling unsafe code, interoperating with legacy code bases, and using Rust's increasingly robust tools. Contains short, easy-to-consume chapters Clearly illustrates innovative features such as lifetimes, ownerships, and patterns Practical, focused, complete, and up-to-date Written for newcomers and professional developers alike More than just a new language, Rust represents a philosophical shift in how you code. In Programming with Rust, you'll master both the techniques and the mindset.

Properties of Aluminium Gallium Arsenide

Models and measurements intercomparison II (MM II) summarizes the intercomparison results from model simulations and observations of stratospheric species. Representatives from 23 modeling groups using 29 models participated in these MM II exercises between 1996 and 1999. Twelve of the models were two-dimensional zonal-mean models while 17 were three-dimensional models. This was an international effort as seven were from outside the U.S.A. Six transport experiments and five chemistry experiments were designed for various models. Models participating in the transport experiments performed simulations of chemically inert tracers providing diagnostics for transport. The chemistry experiments involved simulating the distributions of chemically active trace gases including ozone.
