They grow around the equatorial belt. The fruit ...

Excellent fruit, cocoa bean is the main ingredient

The cacao tree is native to the Amazon Basin. It was domesticated by the Olmecs (Mexico)

when can harvest, their colour tends towards yellow or orange

The three main varieties of cocoa plant are Forastero, Criollo, and Trinitario

The first is the most widely used, comprising 80- 90% of the world production of cocoa

In 2017, world production of cocoa beans was 5.2 million tonnes, led by Ivory Coast with 38% of the total

Other major producers were Ghana (17%) and Indonesia (13%).

The harvested seeds will be processed and placed in barrels to ferment and remove the pulp.

During this time, the seeds and pulp undergo \"sweating\", where the thick pulp liquefies as it ferments

The fermented pulp trickles away, leaving cocoa seeds behind to be collected

Drying in the sun is preferable to drying by artificial means, as no extraneous flavors such as smoke or oil

And the next part of the video we will see how it is processed into chocolate in the factory.
