## **Metallogeny of Tin**

Metallogeny of Tin attempts to develop a general metallogenic model for tin in identifying the essential or relevant processes in tin ore formation. The methodological principle is based on an interplay between a background of basic petrogenetic concepts and a number of specific local and regional data on tin deposits and tin provinces. The author condenses the many apparently specific complexities encountered in individual ore deposits to a few major processes of general importance.

A beautifully illustrated version of the classic fairy tale about a tin soldier's adventure and his love for a ballerina, retold with a twist. With her signature warmth and lyricism, Newbery winner Cynthia Rylant has

crafted a new version of the classic Hans Christian Andersen fairy tale about a tin soldier who falls in love with a ballerina. As in the original story, the tin soldier's love for the beautiful ballerina is thwarted by a goblin. The tin soldier is separated from the other toys and washed down a sewer, where he encounters a rat and gets swallowed by a fish, but somehow, against all odds, he manages to end up back home only to be cast into the nursery fire. Rylant adds her own twist to the end of the tale, however, for in this version, the tin soldier and the ballerina are melded to each other, rather than melted, in the heat of the fire, so they'll never be parted again. Rylant's expert storytelling paired with Corace's stunning illustrations create a beautiful, unforgettable tale of everlasting love. Praise for *The Steadfast Tin Soldier* "Gracefully written. . . . The book's large format gives plenty of scope for Corace's distinctive illustrations, precise ink drawings brightened with watercolor, gouache, and acrylic paints. Sometimes brilliantly colorful and sometimes more subdued, the scenes can be crowded with dozens of toys or other visual elements, but they show up well from a distance. The subtle depictions of the goblin and his shadow are particularly fine. A softened vision of the literary fairy tale." —Booklist "Text and illustrations weave seamlessly to create an involving, fast-paced update of a much-loved tale. Rylant's retelling is abridged, yet sprightly, and Corace's watercolor, gouache, acrylic, and pen-and-ink illustrations add nuance and whimsy to Andersen's original." —School Library Journal

*Surface & Coatings Technology*, Volumes 59–60 presents the proceedings of the Third International Conference on Plasma Surface Engineering, held in Garmisch-Partenkirchen, Germany, on October 26–29, 1992. This book discusses the widespread applications of plasma and particle beam assisted methods in surface and thin film technology. Volume 59 is organized into 11 parts encompassing 69 chapters while Volume 60 is comprised of eight parts encompassing 49 chapters. This compilation of papers begins with an overview of the kinetic modelling of low pressure high frequency discharges. This text then examines the effect of various deposition parameters on the growth of chamber wall deposits. Other chapters consider the physiochemical behavior of ceramic materials for space applications. This book discusses as well the

economic aspects of the application of plasma surface technologies. The reader is also introduced to the environmental aspects of physical vapor deposition coating technology. This book is a valuable resource for plasma surface engineers, technologists, and researchers.

Excess minerals in the diet and water of animals can have an adverse effect on animal health, consumers, and the environment. Preventing unsafe mineral exposure is a fundamental part of animal nutrition and management. At the request of the Food and Drug Administration, the National Academies convened a committee to make recommendations on animal tolerances and toxic dietary levels, updating a 1980 report on mineral tolerance in domestic animals. Based on a review of current scientific data and information, the report sets a "maximum tolerable level" (MTL) for each mineral as it applies to the diets of farm animals, poultry, and fish. The report includes an analysis of the effects of toxic levels in animal diets, and it identifies elements that pose potential human health concerns. The report recommends research that includes a better characterization of animal exposure to minerals through feedstuffs; a better understanding of the relationship between mineral concentrations in feed and water and the levels in consumer products such as meat, milk, and eggs; and more research on the maximum tolerable level of minerals for aquatic and companion animals.
